## **Customer Reviews**

Scoring well on College-Level Examination Program (CLEP) Biology is important for your ability to bypass taking the class and earn college credit.Â To achieve a high score, you need to develop skills to properly apply the knowledge you have and quickly choose the correct answer.Â You must solve numerous practice questions that represent the style and content of the CLEP questions.Â Understanding key science concepts is more valuable than memorizing terms. This book provides over 1,550 biology practice questions that test your knowledge of all Biology topics covered in an undergraduate biology course and tested on CLEP.Â In the second part of the book, you will find answer keys and detailed explanations to questions, except those that are self explanatory.Â These explanations discuss why the answer is correct and - more importantly - why another answer that may have seemed correct is the wrong choice.Â Â Â The explanations include the foundations and details of important science topics needed to answer related questions on CLEP.Â By reading these explanations carefully and understanding how they apply to solving the question, you will learn important biology concepts and the relationships between them. This will prepare you for CLEP Biology exam and will significantly improve your score.Â Â All the questions are prepared by our

science editors who possess extensive credentials and are educated in top colleges and universities. Our editors are experts on teaching sciences, preparing students for standardized science tests and have coached thousands of undergraduate and graduate school applicants on admission strategies. Used books may have outdated content. We make content updates regularly based on customers' comments, editorial input and latest test changes. The questions and explanations were great. I found this book very helpful in preparing for the exam - great results. My friend gave me great advice when she recommended it as THE study tool. Very satisfied with the book. Use it to pass the exam.

When they say "High Yield" they mean it. I have a Bachelor's degree in Agronomy, so I have had college level Biology, Chemistry, and Botany in classes designed for science majors. I bought this book for my daughter to prepare for the Biology CLEP test, but it appears that the questions are much more detailed than the types of questions that are common on the CLEP. I couldn't answer half of them and my daughter would find them unintelligible. I need a book of common type questions, not the 10% of the questions that sort out the adequately knowledgeable from the geniuses. If you need to ace the test for some reason and you are amazingly well prepared, this might be the book for you, but if you are a non-science major--try another option. By the way, the SAT Biology book by this company is the same book as this. It certainly doesn't cover high school biology.

Questions were a great source of practice. My teacher recommended this book as some of his former students had used the book with great results in the past. I am very happy with my test results and thank this book for being ready for the exam. I practiced some questions within their topic and then mix questions closer to test day to be ready for the actual test. The explanations let me learn a lot of biology to build on, what i thought, was my strong foundation. Practice went well and test results were great. Thanks!

great content. really benefited from the practice. similar to the actual test

Excellent book go deep in to the subject.

ItÃ¢Â™s a very good book and it has certainly met my needs. Every material is very useful to me in the preparation for my test.

Super

My friend recommended this book to me after taking the CLEP biology exam. We both did great on the exam. This book has valuable questions and excellent explanations. I learned so much from this book and the results are what I hoped for. Spend time with the explanations as they give both the correct answer and often a review of important biology concepts. Very happy with my use of this book to prep for the CLEP. I used the same company in preparing for the CLEP chemistry with satisfaction from my score.
