Who Owns The World: The Surprising Truth About Every Piece Of Land On The Planet

Synopsis

You don't have to be a student of geography or cartography to have an interest in the world around you, especially with globalization making our planet seem smaller than ever. Now you can IM someone in Alaska, purchase coffee beans from Timor-Leste, and visit Dubai. But what do we really know about these lands? **WHO OWNS THE WORLD** presents the results of the first-ever landownership survey of all 197 states and 66 territories of the world, and reveals facts both startling and eye-opening. You'll learn that: --Only 15% of the world's population lays claim to landownership, and that landownership in too few hands is probably the single greatest cause of poverty. --Queen Elizabeth II owns 1/6 of the entire land surface on earth (nearly 3 times the size of the U.S.). --The Lichtenstein royal family is wealthier than the Grimaldis of Monaco. --80% of the American population is crammed in urban areas. --The least crowded state is Alaska, with 670 acres per person. The most crowded is New Jersey, with .7 acres per person. --60% of America's population are property owners. That's behind the UK (69% homeownership). --And much, much more! With its relevance to contemporary issues and culture, **WHO OWNS THE WORLD** makes for fascinating reading. Both entertaining and educational, it provides cocktail party conversation for years to come and is guaranteed to change the way you view the U.S. and the world.

Kevin Cahill was born in the Irish Republic, and now lives in Devon, in the UK, with his wife. They have three daughters. A former army officer, Kevin has worked in the House of Commons, the House of Lords, the Irish Parliament, and the European Parliament as an adviser and researcher.

He is the author of a number of books on business, trade, and landownership and was a researcher on the original Sunday Times Rich List. Rob McMahon is a freelance writer and editor with more than fifteen years experience in book publishing.

GREAT BOOK WITH BASIC INFO.

have not read yet but will very soon, but if I know Kevin Cahill it will be fairly accurate

Who Owns The World? The Surprising Truth About Every Piece of Land on The Planet is an encyclopedic accounting of land ownership on our globe. It is packed with fascinating facts: Did you know that Queen Elizabeth owns 1/6th of all the land on earth? Did you know that the largest private landowner in the U.S. is Ted Turner, who owns 1,800,000 acres of land? (Yes, all those zeroes belong in that number.) Have you ever heard of the British Indian Ocean Territory, a land area of 14,720 acres which is now believed to be used as a prison for those captured in the war on terror? Though most of the 369-page paperback is devoted to information about who controls every square inch of land, authors Kevin Cahill and Rob McMahon explain their purpose in putting this book together: This book asserts that the main cause of most remaining poverty in the world is an excess of landownership in too few hands. This book will also assert that private ownership of a very small amount on land - one-tenth of an urban acre or an acre or two of rural land - granted to every person on the planet has the potential to, and, I believe, begin ending poverty on a global basis. The book will go further and reassert that the right to the direct ownership of land is a fundamental human right. After a 60-page introduction that unpacks these assertions, the remainder of the book surveys every country of the world, giving information about population, size, gross national income, percentage of land held by private owners, a line or two about the country's history, and an explanation of how the country is owned. The book doesn't offer solutions to the inequalities presented in the book (a handful of kings, queens, sheiks, religious institutions and individuals control most of the land on earth) or do much to tackle the dicey issues of political and/or ethnic identity that have shaped most modern nation-states. But then again, it isn't meant to do so. Who Owns The World? tells a compelling, unsettling story with stats, and is an interesting reference tool for students and those interested in international politics.

Ever wonder who owns the world? Do you or someone you know enjoy reading about history and little known facts? Then you would definitely be interested in a new book I received from Hachette

Books. It's entitled *Who Owns the World: The Surprising Truth About Every Piece of Land on the Planet* and it's 384 pages of interesting and sometimes surprising facts from author Kevin Cahill. This is a pretty thick book, but like many resource books, I don't think it is necessarily meant to be read from cover to cover. It features listings of all the major countries in the world, and all the states of the United States. Each listing contains facts and figures about land ownership, but also background information about how the piece of land was originally procured or confiscated. I truly found the background information very interesting. Especially when it came to the states of the U.S., it was very educational to find out just how the government came to own these pieces of land. I will be using this book to go along with some of our homeschooling curriculum. I was shocked to discover how much property that Queen Elizabeth II owned! There are so many British commonwealths and territories all around the world! I also enjoyed comparing and contrasting the different countries. I know.... I'm a nerd. :) For instance, Alaska is about the size of the country of Iran (every country or territory listed also has a the country closest in size listed with it for easy comparison) and has about 670 acres per person. Iran on the other hand has only has 6 acres per person. Some of these countries are horribly crowded, like India with only 0.7 acres per person! In a country that large, can you imagine such a large population? There were so many places that I had never heard of, so I pulled out the globe and went to work figuring out where these countries and islands were. I spent a lot of time going back and forth throughout the book looking at listings, and reading about the history behind it all.
