According to Fredericks, children learn science best through discovery, with teachers and parents facilitating the learning rather than teaching scientific concepts and facts. Intended for use with grades K-6, *From Butterflies to Thunderbolts* encourages such an approach by suggesting science trade books and activities to build on children's natural curiosity. The book consists of nine parts, covering subjects such as animals, plants, the environment, dinosaurs, and space. There are three or four chapters on a subject, with each chapter focusing on a single book. The format includes a bibliographic entry, a brief summary of the book, several open-ended questions for use with students, suggested activities, "incredible facts," and a bibliography of related literature. Though this book will aid in efforts to use literature in the science curriculum, it has a few problems. One is that it does not indicate the appropriate grade or reading level for each book. Another is the age of some of the books featured: almost half are at least five years old, with some published before 1990. Finally, it lacks a comprehensive list of the works cited—an important aid in collection development. Despite these drawbacks, teachers or librarians could use this title to come up with ideas for science activities. ?Jessica Foster, Fairfax County (VA) Public Schools Copyright 1998 Reed

Anthony D. Fredericks has written more than 30 teacher resource books in the areas of science, social studies, and language arts, plus six children's books on animals, nature, and environmental studies. He and his family live on a mountainside in south-central Pennsylvania.

This book by Anthony Fredericks is a great tool for finding trade books to use in the science curriculum. Plus, Fredericks himself is such a great guy at his seminars - his information is very engaging and applicable for younger students. I was surprised to find this was no longer in print and it is very useful.
